**HINT:**

This question is to help you figure out where each allomorph occurs <u>when a root has more than one allomorph</u>. Roots that have just one allomorph is not of interest in this question.

So: if a root has form AAA and form BBB, give their phonetic environment (even if it seems obvious!). For example:

AAA			BBB	

Do this for every pair that has multiple allomorphs. This is meant to be a very easy problem.
